

Product Data Sheet

CLAY-2-GO

CLAY BAR/FALL-OUT ERASER

- Revolutionary Clay-2-Go removes harmful environmental contaminants e.g. paint overspray, industrial fall-out, tree-sap, brake dust, emulsion paint spatter, rail dust, volcanic ash, acid rain, etc., which can become bonded into the upper layer of automotive lacquers, chrome, trims, glass, plastics and stainless steel.
- Conventional cleaners, polishes and rubbing compounds will not lift or remove these surface defects, which can be felt as gritty particles when drawing a finger across the vehicle surface, even if they cannot always be seen.
- Removes paint overspray e.g. dry dust, airborne drift etc.
- Clay-2-Go is the safe and easy to use handy and efficient tool to remove these contaminants completely and restore a mirror smooth surface prior to polishing.

Directions for Use:

Wash the surface thoroughly with a shampoo to remove surface dirt and grit. Check Concept Clay is not contaminated with any heavy dirt particles that could scratch. Cut off a quarter of the brick, roll into a ball then flatten into a pancake shape. Spray surface to be decontaminated with Clay-Lube, and spray on face of clay pancake. Using this flattened piece, move in an overlapping pattern similar to sanding. Keep surface lubricated to reduce marring. Continue and repeat process until surface is contaminant free

Use with Clay-2-Go Lube #XP-90040

Code: XP-90029 – 200g
